Summary

Data engineer with 7+ years in pipelines and backend services across robotic manufacturing, retail forecasting, finance and telecom software.

Experience

GROPYUS Berlin, Germany
Data Engineer *Aug 2022 – Present*

- Redesigned Python graph ingestion with PostgreSQL metadata and checksums to skip unchanged subgraphs, improving ingestion speed by about 50%; cut GraphDB alerts from 300 to 5 per half-year.
- Fixed run-volume and Linkerd timeout issues, reducing Dagster pipeline failures from 10% to below 1%; triggered pipelines automatically when project graphs changed.
- Built fault-tolerant CDC/lakehouse/GraphDB pipelines linking robotic manufacturing to enterprise workflows with dlt, dbt, Dagster and Airflow; shipped tested releases through Azure CI/CD.
- Optimised pipelines with dynamic late-data buffers to keep outputs on schedule; added anomaly detection, lineage and custom alerts with Prometheus/Grafana monitoring.
- Developed robot task-sequencing and movement-path algorithms for insulation blowing and screw fastening to minimise travel and mission time; prototyped LLM querying and interpretation of building digital twins.

Sigmoid Bengaluru, India
Software Development Engineer *Jun 2021 – Jul 2022*

- Built Python/Apache Spark pipelines for repeatable sales reporting and Colgate's analysis and optimisation at Walmart.
- Benchmarked forecasting models against the prior algorithm with MLflow to identify more accurate forecasts; received the Bravo Award. Automated Airflow workflows and provisioned Google Cloud/AWS with Terraform.

Amdocs Pune, India
Software Engineer *Jun 2019 – Jun 2021*

- Built Java/Spring alternative-plan selection for Comcast retention agents handling cancellations.
- Delivered CRM features from requirements and wireframes to integration; validated selection with TDD, built REST/SOAP integrations and received the Ninja Award for engineering performance.

Selected AI and Platform Work

Regulation Check | EU AI Act readiness platform *Independent product*

- Built and deployed a tenant-isolated FastAPI/Supabase PostgreSQL platform for AI-system inventories, rule-based EU AI Act readiness screening, auditable evidence and shareable reports.
- Automated GitHub Actions delivery with pinned Docker releases, approvals, startup retries, health checks and rollback to the last known good version.

Technical Skills

Languages: Python, SQL, Java, JavaScript
Data & pipelines: Apache Spark / PySpark, Pandas, Dagster, Airflow, dbt, dlt, ETL/ELT, CDC, lakehouses
Databases & modelling: PostgreSQL / Supabase, MySQL, MongoDB, GraphDB, digital twins
Cloud & delivery: Microsoft Azure, AWS, Google Cloud, Terraform, Docker, Git, GitHub Actions, CI/CD, Kubernetes, Helm, Azure DevOps
Backend & APIs: FastAPI, Spring, REST, SOAP
ML & AI: MLflow, experiment tracking, model registry, model serving, drift checks, LLM prototyping, agent orchestration, validation gates, Claude Code, agentic coding workflows
Reliability: Prometheus, Grafana, anomaly detection, data lineage, fault tolerance, Unleash feature flags

Education and Recognition

Birla Institute of Technology Mesra India
Bachelor of Engineering in Computer Science Aug 2015 – Jun 2019
First Class with Distinction | Facebook PyTorch Scholar | Infosys HackWithInfy Top 200
