Summary

Data Engineer with 7+ years building production pipelines, orchestration, cloud workflows, and backend integrations. Applies platform discipline to agentic systems through bounded execution, deterministic acceptance checks, human review, and recoverable delivery. Hands-on with Python, SQL, CDC, ETL/ELT, Dagster, dbt, lakehouse architectures, and CI/CD.

Experience

GROPYUS

Data Engineer

Berlin, Germany

Aug 2022 – Present

- Build and optimise Python data pipelines connecting robotic manufacturing systems with enterprise platforms across CDC, lakehouse, and graph-database architectures.
- Model and orchestrate production workflows with Dagster, Airflow, dbt, and DLT; ship tested changes through Azure CI/CD.

Sigmoid

Software Development Engineer

Bengaluru, India

Jun 2021 – Jul 2022

- Built repeatable ETL pipelines for commercial sales reporting, transforming data with Python, PySpark, and Pandas.
- Orchestrated workflows with Airflow and provisioned delivery infrastructure with Terraform across Google Cloud and AWS.

Amdocs

Software Engineer

Pune, India

Jun 2019 – Jun 2021

- Translated CRM requirements and wireframes into Java and Spring backend capabilities and enterprise integrations.
- Developed REST and SOAP service interfaces, carrying changes from implementation through integration.

Selected Systems

Regulation Check — EU AI Act Readiness Platform

Live independent product

- Integrated an LLM through Vercel AI Gateway to turn free text into schema-validated AI-system records; bounded fields, fallback, and human confirmation keep outputs provisional.
- Built the tenant-isolated FastAPI and Supabase PostgreSQL product around deterministic screening and sourced evidence; used MCP-connected tools for bounded research and delivery verification.
- Shipped approval-gated GitHub Actions delivery with pinned Docker images, health checks, retry, and last-known-good rollback.

Retail Demand MLOps Demo — Model Lifecycle

Recent learning project

- Built a synthetic retail forecasting lifecycle with MLflow tracking and registry, gated model promotion, FastAPI serving, Prometheus metrics, drift checks, Docker, and CI.

Technical Skills

ML and agentic systems: MLflow, model registry, Prometheus, drift checks, LLM integration, structured outputs, Model Context Protocol (MCP), human review

Languages: Python, SQL, Java, JavaScript

Data engineering: CDC, ETL/ELT, Dagster, Airflow, dbt, DLT, PySpark, lakehouse architectures

Cloud and delivery: Microsoft Azure, AWS, Google Cloud, CI/CD, Docker, GitHub Actions, Terraform

Databases and interfaces: PostgreSQL, graph databases, MySQL, MongoDB, REST APIs, SOAP APIs

Education

Birla Institute of Technology Mesra

Bachelor of Engineering in Computer Science

India

Aug 2015 – Jun 2019
